

Empowering Learners to Build Production - Ready
AI Agents

Applied Agentic AI for PMs/TPMs

Week 2 - RAG Knowledge Agents

Problem Statement

Building a Grounded, Retrieval-Augmented Metrics Intelligence Agent on Zapier

Background

Your organization's leadership team relies on weekly operational metrics (e.g., revenue, conversion rates, churn, SLA compliance) stored across **Google Sheets, CSV exports, and internal knowledge documents** (Drive, Notion, Confluence). Today, insights are generated manually, leading to delays, inconsistencies, and ungrounded AI summaries that cannot be trusted.

You have been asked to design and implement an **automated AI workflow in Zapier** that answers leadership questions **only using verified internal sources**, explains anomalies, and produces a concise, citation-backed email report.

Data Sources

-  NovaCart Company Intro.pptx
-  NovaCart Company Annual Report 2024.docx
-  NovaCart_Product_Catalog.pdf
-  SKU_Weekly_Sales_Conversion_3Y_with_Revenue.xlsx

Objective:

Build a **Retrieval-Augmented Generation (RAG) workflow** that:

1. Ingests metrics and documentation from multiple sources
2. Embeds and indexes content for semantic retrieval
3. Responds to user queries with **grounded, source-cited answers only**

This solution will explicitly demonstrate **why RAG outperforms prompt-only approaches** for enterprise metrics analysis.
